COVER: The cover shows proteins whose mRNA expression is regulated in liver by the orphan nuclear receptor, LRH-1. Lee *et al.* used liver and intestine-specific LRH-1 knockout mice to demonstrate that LRH-1 regulates bile acid homeostasis through effects in both tissues. From the article by Lee *et al.*, in this issue, pages 1345–1356.

The editors thank Dr. Ron Smith, Alcon Laboratories, Fort Worth, TX, for collaborating with the authors to create the figure on the cover.

The editors would also like to acknowledge the design for our page ender which appears at the end of each article. The symbol represents interaction between ligand, receptor, and DNA. It evolved from an original concept designed by Lois B. Thompson for MOLECULAR ENDOCRINOLOGY.
